

Wordle User Guide

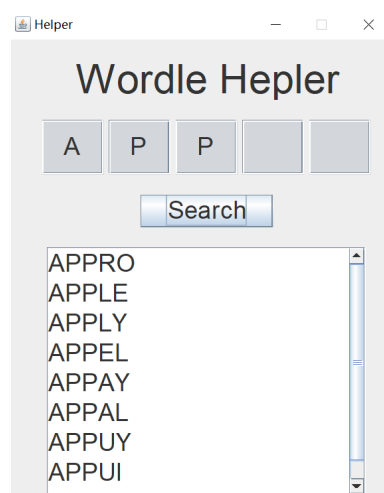

This is a game like [Wordle](#).

Game Rules

- Guess a hidden target 5-letter word within 6 attempts.
 - You can input your answer by physical keyboard or virtual keyboard
- When you submit your answer, you'll get feed back
 - Green means the letter is contained in the word and is in that position
 - Yellow means the letter is contained in the word but not in that position
 - Grey means the letter is not contained in the word

Helper

You can input the letter to find words that include these letters so that you can guess the answer.

Compile And Run

To play this game, you must compile the program first. Then run `Application` java class.

Open the command line in the project directory and enter the following command:

```
cd ./source
javac Application.java
java Application
```

Or just run the script named [Wordle.bat](#).
